CISA Issues Four More Industrial Control Systems Advisories

Article By:

Linn F. Freedman

On August 22, 2023, the Cybersecurity and Infrastructure Security Agency (CISA) issued four more [advisories](#) related to industrial control systems. The advisories are applicable to four different industrial control products, explain the risk of the vulnerability (e.g., “successful exploitation of these vulnerabilities could allow an attacker to compromise availability, integrity, and confidentiality of the targeted devices”), and how to mitigate the vulnerabilities.

CISA alerts related to Industrial Control Systems are becoming more frequent, [read previous blog post [here](#)] and Industrial Control Operators should keep a close eye on these advisories as they are issued.
