In less than 7 months, the EU conflict minerals regulation will take full effect, and importers into the European Union of certain threshold amounts of tin, tantalum, tungsten and gold (3TG) and of metals containing 3TG will be subject to it. As of today, despite Brexit, importers into the UK will be subject to it as well. Those Union importers should be taking action now to supplement their compliance programs to address the due diligence, risk mitigation and audit requirements of the EU regulation. In anticipation of those requirements, some importers may consider replacing certain of their direct and indirect suppliers. And, such changes take time.

The EU conflict minerals regulation is expected to cover over 1,000 Union importers and will indirectly impact tens of thousands of economic actors in the European Union – many more than are covered by the US conflict minerals rule. The EU regulation covers more forms of minerals and metals and has a much broader geographic focus than the US rule. Further, Union importers will be required to obtain third-party audits and undertake consultations with stakeholders if they reach certain conclusions about the direct and indirect suppliers in their supply chains.

EU Conflict Minerals Regulation — Adding to Your Compliance Program outlines the
types of initial steps a Union importer can take to develop (or expand) its conflict minerals compliance program to address the requirements of the EU regulation.
