This week, I sat down with Sheryl Lindros Dolan, Senior Regulatory Consultant with B&C and Senior Regulatory Specialist with our consulting affiliate, The Acta Group, and Meibao Zhuang, Ph.D., Senior Scientist/Regulatory Consultant with B&C and Acta, to discuss pesticide tolerances, what are they, how does the U.S. Environmental Protection Agency (EPA) develop them, and how well government and
industry stakeholders communicate their utility in ensuring a safe and reliable food supply. We also wander into the complex world of soil amendments and adjuvants, so if you do not know what these are, listen up.
