The U.S. Environmental Protection Agency (EPA) will hold a webinar on August 17, 2022, on the “EPA PFAS Strategic Roadmap: Research Tools and Resources.” EPA states that “[a] growing body of scientific evidence suggests that exposure at certain levels to specific [per- and polyfluoroalkyl substances (PFAS)] can adversely impact human health and other living things.” The webinar will provide a brief
overview of EPA’s *PFAS Strategic Roadmap* and ongoing efforts by EPA’s Office of Research and Development (ORD) to address key PFAS research needs for environmental decision-making. During the webinar, ORD scientists will highlight two recently released data sources: EPA’s *PFAS Thermal Treatment Database (PFASTM)*, which contains information on the treatability of PFAS via various thermal processes, and *Systematic Evidence Map for PFAS*, which summarizes available toxicity evidence for approximately 150 different PFAS. Recent updates to other PFAS resources will also be shared. Registration is now open.
